EDUCATION

B.Tech – AI Engineering
GHRCE, Nagpur · 2023–2027
CGPA: **7.8 / 10**

Higher Secondary – CBSE
Bhavan's B.P. Vidya Mandir · 2023
Score: **82%**

CERTIFICATIONS

- ✓ Azure AI Fundamentals (AZ-900) – Microsoft
- ✓ Java Programming – IIT Madras
- ✓ Virtual AI Internship – CodeSoft
- ✓ Python Programming – NPTEL

SOFT SKILLS

- ◆ Problem Solving
- ◆ Clean Code Mindset
- ◆ Remote Collaboration
- ◆ Technical Writing
- ◆ Fast Learner

SPOKEN LANGUAGES

English · Hindi · Marathi

3+ Years Coding in Python	85% ROUGE-L Score NLP Pipeline	500+ Configs/Run Generated	3 AI Projects Delivered
-------------------------------------	--	--------------------------------------	-----------------------------------

PROFILE

Third-year AI Engineering student writing production-quality Python since 2022. I build end-to-end ML pipelines, REST API backends, and data-preprocessing systems — not toy scripts. I care about clean architecture, edge-case handling, and test coverage. Looking for Python roles (AI/ML, backend, data engineering, or tooling) where I can ship real code that matters.

PYTHON SKILLS

Core Python	Python 3.x · OOP · Generators · Decorators · Type Hints · PEP 8 · AsyncIO
ML / AI	PyTorch · TensorFlow · Hugging Face Transformers · scikit-learn · LLM APIs
Data Engineering	NumPy · Pandas · Data Preprocessing · Tokenization · ROUGE Evaluation
APIs & Backend	REST API Design · JSON · Error Handling · Edge-Case Management · SDLC
Tooling / QA	Git & GitHub · Jupyter · Google Colab · VS Code · Linting · Unit Testing
Other Languages	Java · C · C++ (secondary)

PROJECTS

Text Summarization — NLP & LLM Pipeline [Python] [Hugging Face] [REST API] [NLP] 2024

- **85% ROUGE-L** on CNN/DailyMail benchmark using transformer-based pipeline.
- Full preprocessing stack: tokenization, stopword removal, normalization — **30% better** model input quality.
- REST API backend with **<2 s** average response time; robust error handling and edge-case reporting.
- Benchmarked extractive vs. abstractive LLM outputs via structured prompt engineering experiments.

AI-Powered Procedural Dungeon Generator [Python] [Graph Algorithms] [BFS/DFS] [PCG] 2024

- **500+ unique dungeon configurations** per run using graph-based BFS/DFS pathfinding algorithms.
- Generation optimised to **<150 ms** per instance through profiling and algorithmic refinement.
- 100% traversable map guarantee via deterministic test coverage on room-placement logic.
- Modular Python architecture: clean separation of generator, pathfinder, and renderer components.

Event Information Mobile App [Java] [Android] [REST APIs] [UI/UX] 2023

- 50+ real-time event listings with filter/search; consumed external REST APIs with robust error fallbacks.
- Iterative UI testing cut user navigation steps by **40%** vs. initial prototype.

INTERNSHIP EXPERIENCE

AI Virtual Internship — CodeSoft

Remote · AI Engineering Track · 2024

- Delivered **3 AI mini-projects** applying supervised learning and NLP in a structured remote workflow.
- ML model building, data preprocessing, and result evaluation — documented for async team review.
- Operated fully remotely: async written communication, self-managed deadlines, clear deliverable handoffs.
